

What is claimed is:

1. A hand-held power tool, in particular a barrel jigsaw, having a barrel grip (10), characterized by means of a detachable top handle (12) and an attaching device (14) for attaching the top handle (12).
2. The hand-held power tool as recited in claim 1, wherein the fastening device (14) is provided for tool-free attachment and/or detachment of the top handle (12).
3. The hand-held power tool as recited in claim 1 or 2, wherein an on-off switch (18) is at least partially integrated into the top handle (12).
4. The hand-held power tool as recited in claim 3, wherein a locking mechanism (20) for locking the on-off switch (18) is integrated into the top handle (12).
5. A hand-held power tool having a handle (12) and an on-off switch (18) at least partially integrated into the handle (12) and having a locking mechanism (20) for locking the on-off switch (18), in particular as recited in claim 4, wherein the locking mechanism (20) has at least two at least largely decoupled actuating elements (22, 24).
6. The hand-held power tool as recited in claim 5, wherein the actuating elements (22, 24) are situated on opposite sides of the top handle (12).
7. The hand-held power tool as recited in claims 3 through 6, wherein the fastening device (14) is at least partially integrally joined to a functional component of the on-off switch (18).

8. The hand-held power tool as recited in claim 7,
wherein a holding mechanism of the fastening device (14) is integrally joined to
an actuator rod guide.

5

9. The hand-held power tool as recited in claim 8,
wherein the holding mechanism is comprised of a locking pin (26).

10. The hand-held power tool at least as recited in claim 3,
10 wherein the on-off switch (18) at least partially integrated into the top handle (12)
is at least in part integrally joined to an on-off switch (28) at least partially
integrated into the barrel grip (10).

11. The hand-held power tool as recited in one of the preceding claims,
15 wherein the top handle (12) is provided to constitute a support surface (30, 32)
for the back of a hand.

12. The hand-held power tool as recited in claim 11,
wherein the support surface (32) is comprised of a soft elastic component (34).
20

13. A top handle (12) for a hand-held power tool as recited in one of the
preceding claims.
